TP6 PR-B /97

With TP6/PR-B it is possible to eliminate the preforming operation by replacing the cutting/forming wheels with only cutting wheel.

MACHINE WEIGHT = 6 kg
GROSS WEIGHT = 8 kg

The Model TP6/PR-B is designed for cutting-forming and bending taped axial components. The "stand-off" form keeps the component body off the P.C. Board.

The machine handles components with lead diameter from 1 to 1,4mm (.039 to .055 inc.). The high quality and reliability of the TP6/PR-B ensure the best operation for a very long time. Maintenance is mainly performed by cleaning the discs.

The CS10 loose component feeder is an accessory that attaches to the TP6/PR-B to handle loose parts. Its assembly to the machine is very quick and easy. The motor drive unit MOT98, driving with foot pedal also, and adjustable speed, will make the operation automatic and will increase the production with both taped and loose components. When working with components on tape and reel we suggest the use of the BR6 reel holder. The TNS is an accessory that helps with the ejection of the waste tape.

WARNING: The new system 97 is available with all the existing versions of TP6/PR-B. In this case the maximum Pitch will be 40 mm and maximum B will be 10 mm.
