

Information for Product: **Stati-Check Meter**

This meter can be wall mounted outside of a sensitive area to provide voltage reading on persons entering and a repetitive read for operators already present in the area. Also detects static difference in wrist wraps, coil cords, bonding plugs and custom floors.

Additional information available below.

Monitor all of your static sensitive areas. A unique visual method is provided by the ACL 600 to detect how much static charge a person is carrying. The unit can be easily wall mounted outside of a sensitive area to provide voltage readings on persons entering and a repetitive read for operators already present in the area.

Also effective in detecting the difference in potential between two people and in determining the effectiveness of wrist straps, coil cords, bonding plugs, custom floors, spray coating, garments, chairs, etc.

Meter must always be grounded to provide an accurate reading and to allow for instant discharge to a safe handling limit. The unit remains permanently switched on with a battery life of 6 months

Weight: 220g

Size: 14.5" X 9.0" X 3.3"

Accuracy: +/-5%
